### **Content of Bisphenol A in BRAWO- resins**

Dear Dr. Lill,

regarding your inquiry concerning the content of Bisphenol A in BRAWO resins we can inform you as follows:

Bisphenol A is a raw material which is used in the manufacturing process of plastics in the commodity chemicals industry.

In the base component of all types of BRAWO Resins Bisphenol A is used but is already converted at the process plant by using Epichlorhydrin. During this process Epichlorhydrin is used in vast excess. Due to this fact it guaranteed that no Bisphenol A is left in the base (A-component). The components of all types of BRAWO resin manufactured and delivered by MC-Bauchemie do not contain any Bisphenol A.

The hardener (B-component) is formulated with amines of a different chemical function.

Questions? Please do not hesitate to consult us.

Best Regards

Dr. Hans-Günter Seltmann
